

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the subject application, and please amend the claims as follows:

Claim 1. (currently amended): An endoluminal prosthesis comprising:

a proximal end, a distal end and a hollow tubular body comprising a stent scaffold comprising a wire having turns;

the hollow tubular body comprising at least one segment of curvature;

the segment of curvature comprising an inside of the curvature and an outside of the curvature;

wherein the wire and its turns are distributed substantially equally along the length of the prosthesis, including being distributed substantially equally along the length of the segment of curvature.

Claim 2. (previously presented): The prosthesis of claim 1 wherein the segment of curvature is curved in at least one plane with respect to the central axis of the body.

Claim 3. (previously presented): The prosthesis of claim 1 wherein the segment of curvature is curved in at least two planes with respect to the central axis of the body.

Claim 4. (previously presented): The prosthesis of claim 1 wherein the hollow tubular body has at least two segments of curvature wherein the segments of curvature are located in successive progression along the body of the prosthesis and the segments are curved within the same plane of curvature.

Claim 5. (previously presented): The prosthesis of claim 1 wherein hollow tubular body has at least two segments of curvature wherein the segments of curvature are located in successive progression along the body of the prosthesis and the segments are curved within different planes of curvature.

Claim 6. (previously presented): The prosthesis of claim 1 wherein the hollow tubular body has at least two segments of curvature wherein the segments of curvature overlap at least a portion of one another and the segments of curvature are curved within different planes of curvature.

Claim 7. (original): The prosthesis of claim 1 comprising both segments of curvature which overlap and segments of curvature which do not overlap.

Claim 8. (original): The prosthesis of claim 1 wherein the prosthesis comprises at least one segment of curvature to approximate an anatomical shape.

Claim 9. (original): The prosthesis of claim 8 wherein the prosthesis approximates the anatomical shape of the anatomical site intended for placement of the prosthesis.

Claim 10. (cancelled)

Claim 11. (previously presented): The prosthesis of claim 1 wherein the wire comprises a shape memory alloy.

Claim 12. (previously presented): The prosthesis of claim 1 wherein the wire comprises a super elastic alloy.

Claim 13. (previously presented): The prosthesis of claim 1 wherein the wire comprises a polymer.

Claim 14. (previously presented): The prosthesis of claim 1 wherein the wire is nitinol.

Claim 15). (previously presented): The prosthesis of claim 1 wherein the wire is undulating.

Claim 16. (previously presented): The prosthesis of claim 1 wherein the wire is uniformly displaced along the length of the body.

Claim 17. (original): The prosthesis of claim 1 wherein the hollow tubular body comprises a thin-walled tube material wherein the center of the thin-walled tube provides the center of the prosthesis.

Claim 18. (original) The prosthesis of claim 1 wherein the prosthesis further comprises at least one taper along the length of the body.

Claim 19. (original): The prosthesis of claim 1 wherein the prosthesis further comprises at least one aperture on the body between the proximal end and the distal end.

Claim 20. (original): The prosthesis of claim 1 wherein the prosthesis further comprises at least one non-circular cross-section along the length of the body.

Claim 21. (original): The prosthesis of claim 1 wherein the prosthesis further comprises at least one branch of the prosthesis that extends away from the body of the prosthesis.

Claim 22. (original): The prosthesis of claim 1 wherein at least a portion of the prosthesis is covered with a graft covering.

Claim 23. (currently amended): An endoluminal prosthesis comprising:  
a proximal end, a distal end and a hollow tubular body comprising a stent scaffold comprising a wire having turns;

the hollow tubular body comprising at least one segment of curvature;

the segment of curvature comprising an inside of the curvature and an outside of the curvature;

wherein the wire and its turns are distributed substantially equally along the length of the prosthesis, including being distributed substantially equally along the length of the segment of curvature;

and further wherein the hollow tubular body is geometrically shaped and sized to approximate an anatomical shape.

Claim 24. (original): The prosthesis of claim 23 wherein the prosthesis approximates the anatomical shape of the anatomical site intended for placement of the prosthesis.

Claim 25. (cancelled)

Claim 26. (cancelled)

Claim 27. (previously presented): The prosthesis of claim 23 wherein the wire comprises a shape-memory alloy.

Claim 28. (previously presented) The prosthesis of claim 23 wherein the wire comprises a super elastic alloy.

Claim 29. (previously presented): The prosthesis of claim 23 wherein the wire comprises a polymer.

Claim 30. (previously presented): The prosthesis of claim 23 wherein the wire is nitinol.

Claim 31. (previously presented) The prosthesis of claim 23 wherein the wire is undulating.

Claim 32. (previously presented): The prosthesis of claim 23 wherein the wire is uniformly displaced along the length of the body.

Claim 33. (original): The prosthesis of claim 23 wherein the hollow tubular body comprises a thin-walled tube material wherein the center of the thin-walled tube provides the center of the prosthesis.

Claim 34. (original): The prosthesis of claim 23 wherein the prosthesis further comprises at least one taper along the length of the body.

Claim 35. (original): The prosthesis of claim 23 wherein the prosthesis further comprises at least one aperture on the body between the proximal end and the distal end.

Claim 36. (original): The prosthesis of claim 23 wherein the prosthesis further comprises at least one non-circular cross-section along the length of the body.

Claim 37. (original): The prosthesis of claim 23 wherein the prosthesis further comprises at least one branch of the prosthesis that extends away from the body of the prosthesis.

Claim 38. (cancelled)

Claim 39. (withdrawn): A method for fabricating an endoluminal prosthesis comprising the steps of:

Providing a mandrel having a proximal end, a distal end and a body having a central axis wherein the body comprises at least one segment of curvature, the segment being curved with respect to the axis of the mandrel;

Providing a wire having a body and two ends;

Wrapping the wire in a helical manner around the body of the mandrel and securing the wire tightly around the mandrel;

Heat treating the wire and mandrel to set the wire in the shape of the mandrel

And removing the wire from the mandrel and allowing the wire to assume the set shape of the mandrel.

Claim 40. (withdrawn): A method for fabricating an endoluminal prosthesis comprising the steps of:

Providing a mandrel having a proximal end, a distal end and a body having a central axis wherein the body is geometrically shaped and sized to approximate an anatomical shape;

Providing a wire having a body and two ends;

Application No.: 09/556,671

Amendment and Response dated December 28, 2004

Reply to final Office Action of October 19, 2004

Docket No.: 792-21 (formerly 99-0138)
